

Mild steel edging - Specification sheet

Originally created by a landscaper for their personal use so you know it's made to suit the job.

Advantages

The resilient flexibility of mild steel allows for smoother curves. Untreated mild steel can be left to weather giving stunning colour & a maintenance free finish.

6mm thick can be used for driveways and can withstand being driven over without concrete haunching.

Our robust joining system allows tight curves to flow unaffected through joins to enable imaginative shapes set in steel.

Ideal to create an up-stand to retain soil & mulch.

Non-combustible so can be used in fire hazard areas & as oil tank surrounds.

Lifespan well in excess of 25 years.

Sizes available

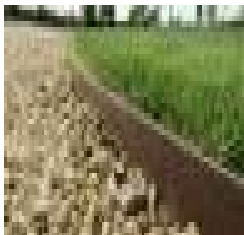

Available in heights from 75mm to 150mm in 3mm thick - supplied in 2m lengths.
